                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence 1273, Application US/09696791

Patent No. 6770633
GENERAL INFORMATION:
APPLICANT: Robbins, Joan M.
APPLICANT: Tritz, Inchard
TITLE OF INVENTION: RIBOZYME THERAPY FOR THE TREATMENT OF PROLIFERATIVE
TITLE OF INVENTION: SKIN AND EYE DISEASES
FILE REFERENCE: 480124407
CURRENT APPLICATION NUMBER: US/09/696,791
CURRENT FILING DATE: 2000-10-25
NUMBER OF SEQ ID NOS: 4523
SOFTWARE: Patentin Ver. 2.0
SEQ ID NO 1273
LENGTH: 19
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           TITLE OF INVENTION: Mch4 and Mch5, Apoptotic Proteases, TITLE OF INVENTION: Nucleic Acids Encoding and Methods of Use

Patent No. 5646115
GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: WU HUNTER, SHIRLEY
APPLICANT: WALLENFELS, LYNDA
TITLE OF INVENTION: NOVEL ECTOPARASITE SALIVA PROTEINS AND
TITLE OF INVENTION: APPARATUS TO COLLECT SUCH PROTEINS
NUMBER OF SEQUENCES: 26
CORRESPONDENCE ADDRESS:
ADDRESSEE: SHERIDAN ROSS & MCINTOSH
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Length 17;
                                                                                                                                                                                                                                                                      ZIP: 9411

                                                                                                                                                                                                                                                                                                Sequence 23. Application US/08630822A
Patent No. 5840695
GENERAL INFORMATION:
APPLICANT: FRANK, GLENN R.
APPLICANT: WALLENFEL, LYNDA
TITLE OF INVENTION: NOVEL ECTOPARASITE SALIVA PROTEINS
TITLE OF INVENTION: AND APPARATUS TO COLLECT SUCH PROTEINS
NUMBER OF SEQUENCES: 107
CORRESPONDENCE ADDRESS:
ADDRESSEE: Sheridan Ross P.C.
STREET: DIVID Lincoln Street, Suite 3500
Query Match 0.3%; Score 17; DB 1; Length 20; Best Local Similarity 100.0%; Pred. No. 69; Matches 17; Conservative 0; Mismatches 0; Indels
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    0.3%; Score 17; DB 1; Length 20; 100.0%; Pred. Sequence 31, Application US/09308003

Patent No. 6326170

GENERAL INFORMATION:
APPLICANT: Burnham, Martin K. R.
APPLICANT: Lonetto, Michael A.
APPLICANT: Warren, Patrick V.
TITLE OF INVENTION: POLYPEPTIDES AND THEIR USES
FILE REFERENCE: GM10093
CURRENT APPLICATION NUMBER: US/09/308,003
CURRENT APPLICATION NUMBER: 06/058,710
EARLIER APPLICATION NUMBER: 60/058,710

SARLIER APPLICATION NUMBER: 1999-09-12
NUMBER OF SEQ ID NOS: 52

SOFTWARE: PattSEQ for Windows Version 3.0

LENGTH: 19
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         1; Indels
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Indels
